AC4000 Custom Patio Cover Marquee Style

Custom made marquee style awnings are constructed of .032 gauge aluminum interlocking roof pans. The white finish is electrostatically applied and baked on. The marquee features a built in gutter system and comes complete with downspout. With a snow load rating of 60 pounds per square foot, the AC4000 meets all inland building codes.

The front gutter and side fascia are made from extruded aluminum. While the roof pans are all white, the fascia can be striped up to five times using any of nine available colors.

The free standing carport includes gutters on both sides and 2 3/4" square aluminum posts. Because the AC4000 carport is constructed of all aluminum and not steel, it will never rust.
