Age Craft  
MANUFACTURING

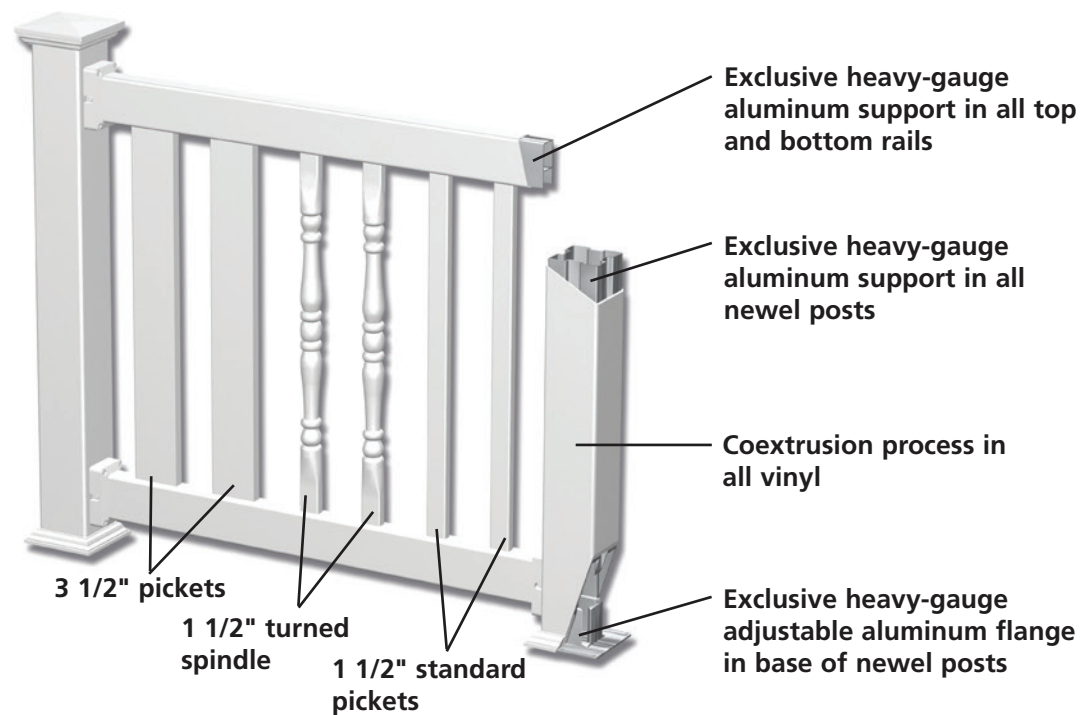

# Why?

Homeowners and professionals alike are choosing Elite and Premium Vinyl Railings by Age Craft not only for their beautiful decorative features, but for our exclusive aluminum support and our coextrusion process. These features enable Age Craft to manufacture the best vinyl railings available!

- Lifetime Warranty**  
 Our vinyl railings are code approved and built to last.
- Coextruded**  
 Age Craft vinyl railing not only looks great but is durable too. Our parts are coextruded to ensure that they are strong where they need to be. The outer layer, or capstock, has an industry leading 10 parts per 100 of the UV inhibitor titanium dioxide along with color stabilizers to keep the color vibrant for the life of the product. While the capstock also includes impact modifiers to withstand everyday wear and tear, the substrate gives the core of the product superior strength and ductility to keep the rail strong and reliable for the life of the product.
- Structurally Superior**  
 Exclusive aluminum support for our newel post and an adjustable flange, as well as aluminum inserts for our top and bottom rails make Age Craft vinyl rail one of the strongest and most versatile in the industry.
- Great Selection**  
 Choice of 2 top rails, 3 picket styles, 36" or 42" heights in white, tan or gray.
- Easy Assembly**  
 Age Craft railings are standard boxed and unassembled. Assembly is available at a low lineal cost.

## What is coextrusion?

- 1 Substrate** and includes:
  - Impact modifiers which provide impact strength and resistance to general abuse during fabrication, transportation, storage and installation.
- 2 Capstock** and includes:
  - Waxes for the sheen on the product
  - UV inhibitor – titanium dioxide
  - Impact modifiers
  - Pigment
  - Color Stabilizer

We use extruded parts made from a rigid dry blend polyvinyl chloride compound formulated for outdoor toughness and color hold. The coextrusion process melds the two layers together, under extreme heat and pressure in the die, forming it into one solid product. In the finished product, the layers cannot be separated by any force.
